

Welcome to Paranoid.EMAIL

Paranoid.EMAIL is the OpenPGP-compliant encrypted email service, aimed to make the whole process of encrypted communication much easier than it exists today at the same time minimizing the inevitable security trade-offs..

plain text

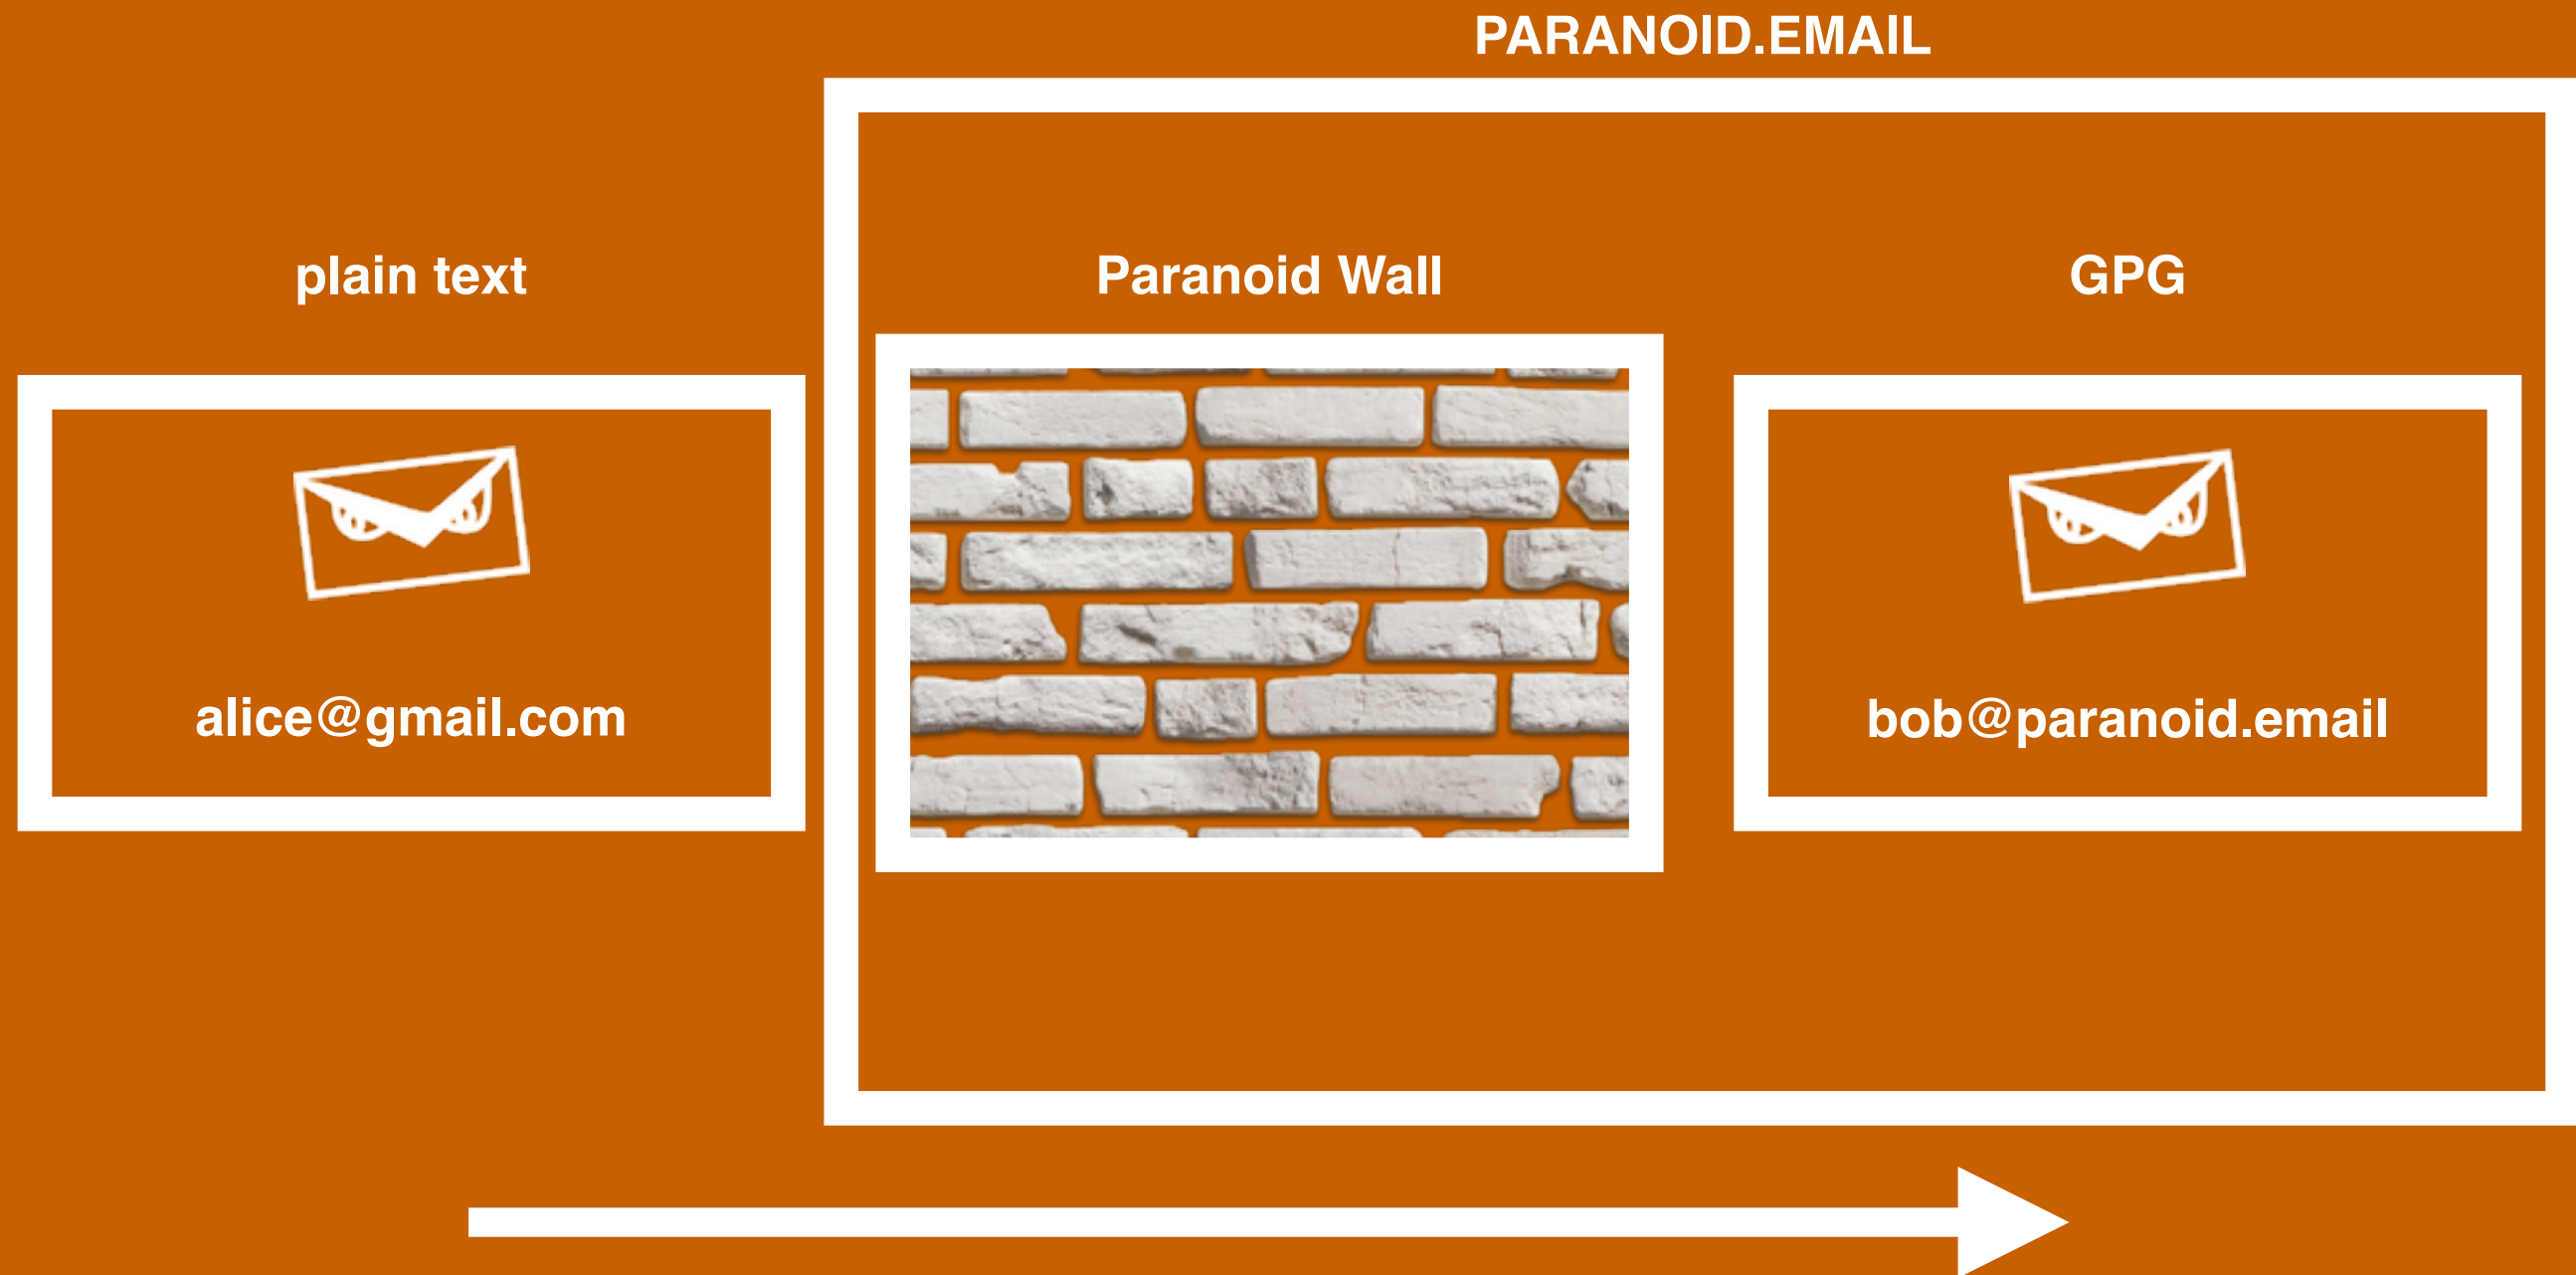

Paranoid Wall

GPG

HTTP : // PARANOID.EMAIL

HTTP : // PARANOID.EMAIL

What Is Paranoid Wall?

Process All incoming Emails

Encrypt Plain Text Emails

Reject eMails if encryption is wrong

HTTP : // PARANOID.EMAIL

What Is Paranoid Wall?

No Plain Text saved on HDD

Ephemeral storage

Paranoid Wall instance lifetime 10 min

HTTP : // PARANOID.EMAIL

bob@paranoid.email

All incoming plain-text eMails encrypted by
Paranoid Wall

bob@2048.email

All incoming eMails are checked if encrypted
with **Bob's public GPG** key and the key is at
least **2048** bit long. If not - **rejected!**

bob@4096.email

All incoming eMails are checked if encrypted
with **Bob's public GPG** key and the key is at
least **4096** bit long. If not - **rejected!**

HTTP : // PARANOID.EMAIL

Do we store or request
private GPG keys of
our clients

No, we neither request private keys, nor
generate them. Private keys should not leave
client's device(s)

Do we provide
web interface to
check emails?

No, we do not. Any webmail solution is
insecure by design and does provide ways
to either decrypt messages on the provider's
side or **backdoors** to **steal** private keys/

Mobile Phone Apps?

There are **third-party Apps**, not perfect but
working, we're **developing our own** to
seamlessly integrate PGP key management
(the most annoying part)
